

Linux installation

Linux is a family of open-source operating systems. They are based on the Linux kernel and are free to download. They can be installed on either a Mac or Windows computer. Here's how to install Linux on a Windows 10 PC.

step 1

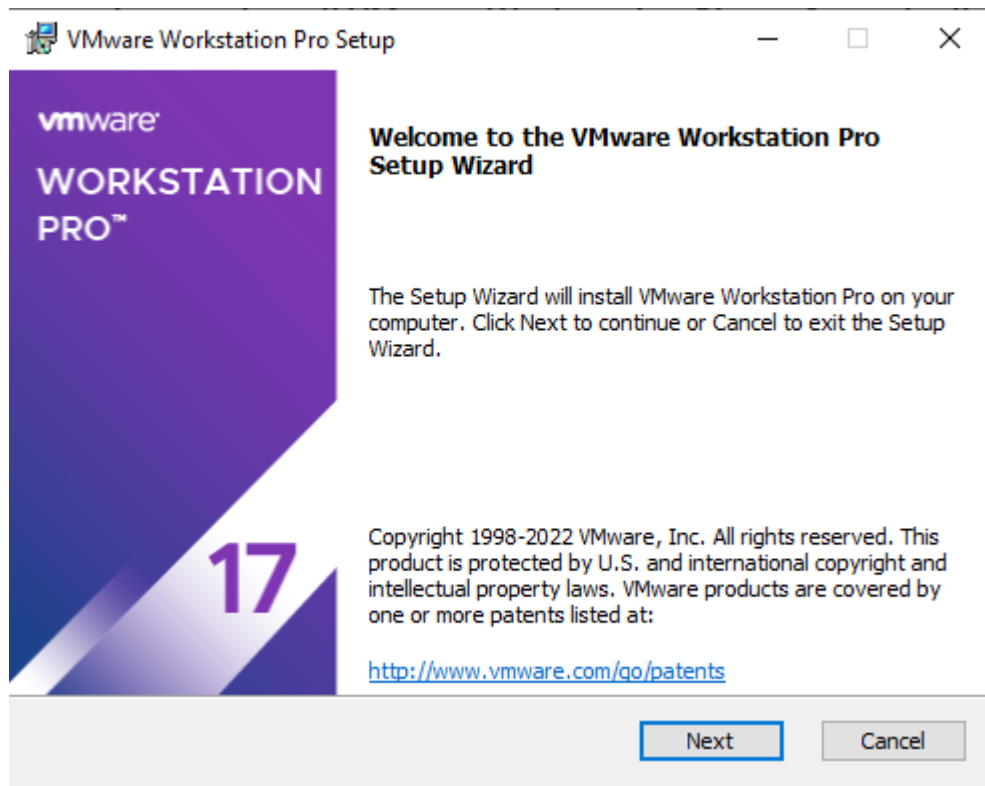

First you have to install VMware Workstation Player from the link below to create virtual machine.

<https://www.vmware.com/asean/products/workstation-player.html>

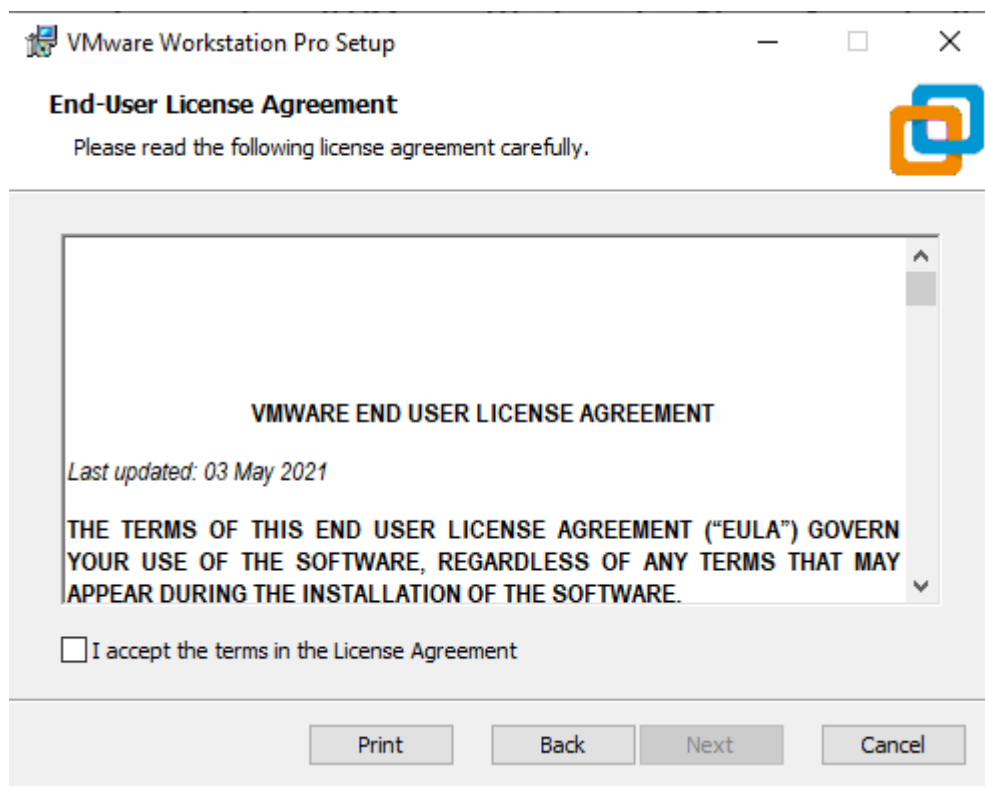

click on button Download For Free.

After downloading go to directory where you have download VMware software double click if you're a window user and install like a normal software. Following windows will show.

Click on Next Button.

Accept License and Click on Next.

After completing the following process. VM ware install successfully now we are able to install Ubuntu(Linux) on our computer.

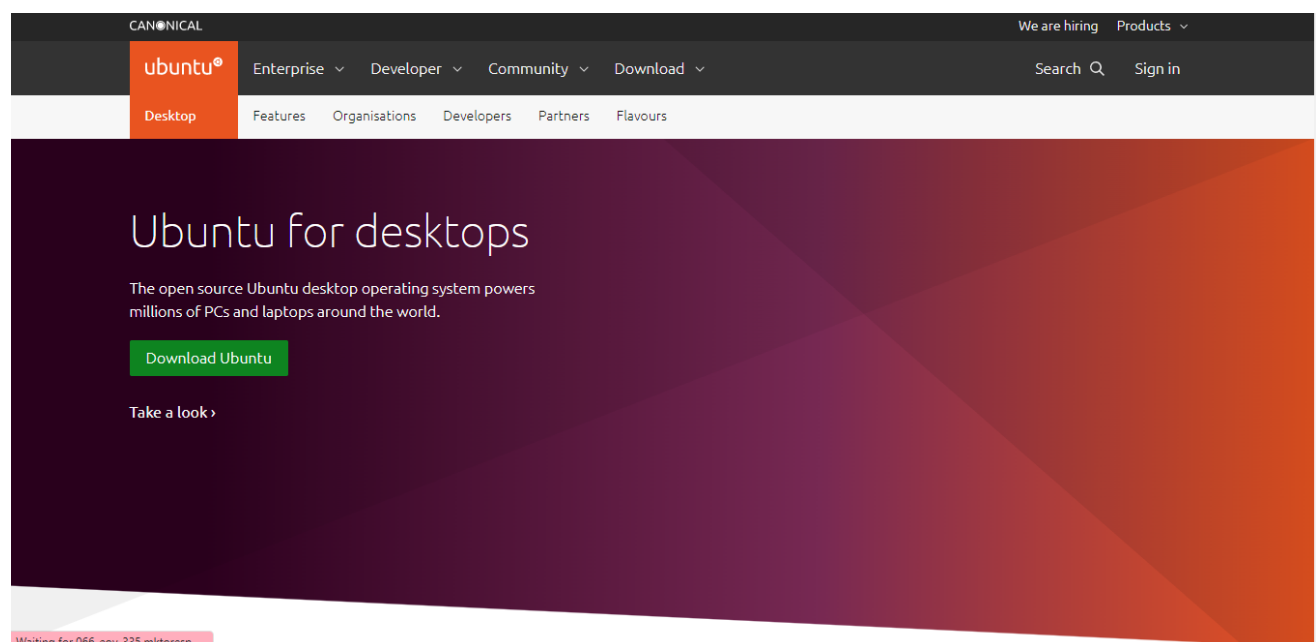

step 2

Download a Linux distro in ISO format. An ISO file is a disk image. Some of the top options are [Ubuntu](#), [Mint](#), or [Fedora](#). They are free to download from each distribution's main website. For this article, we are using Ubuntu.

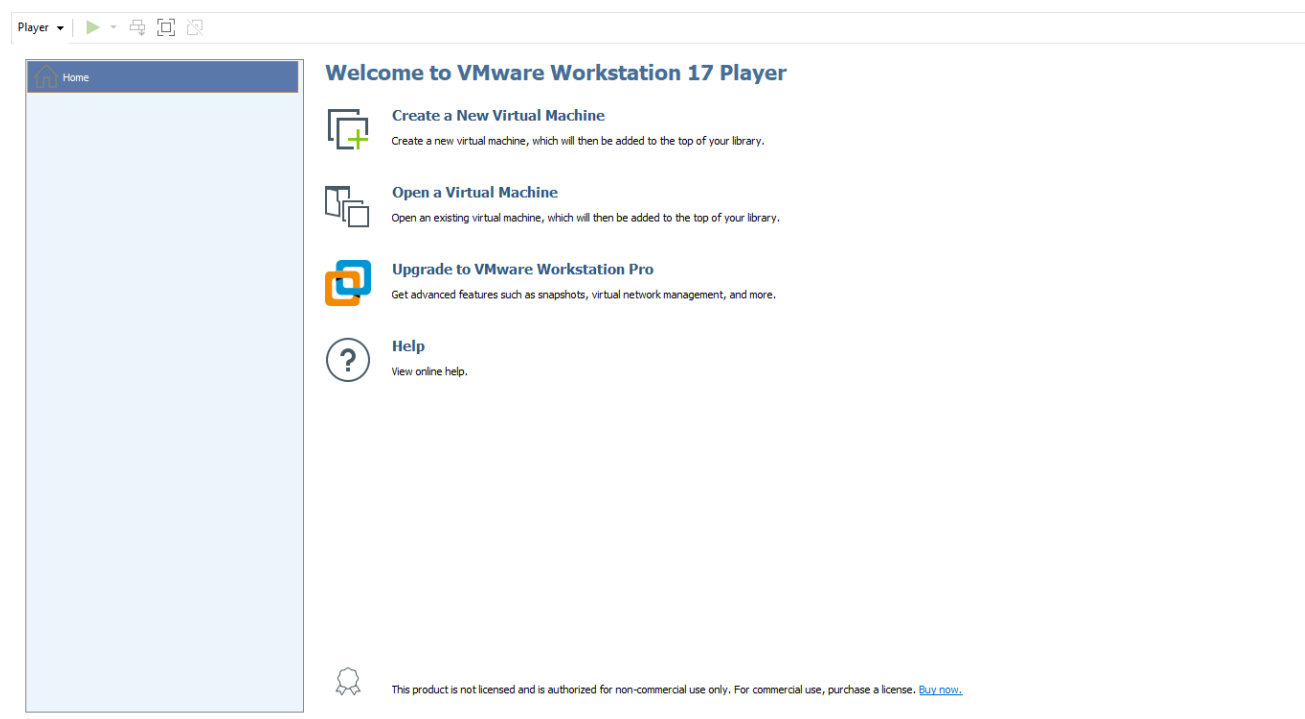

You can Download Ubuntu using link given blow.

<https://ubuntu.com/desktop>

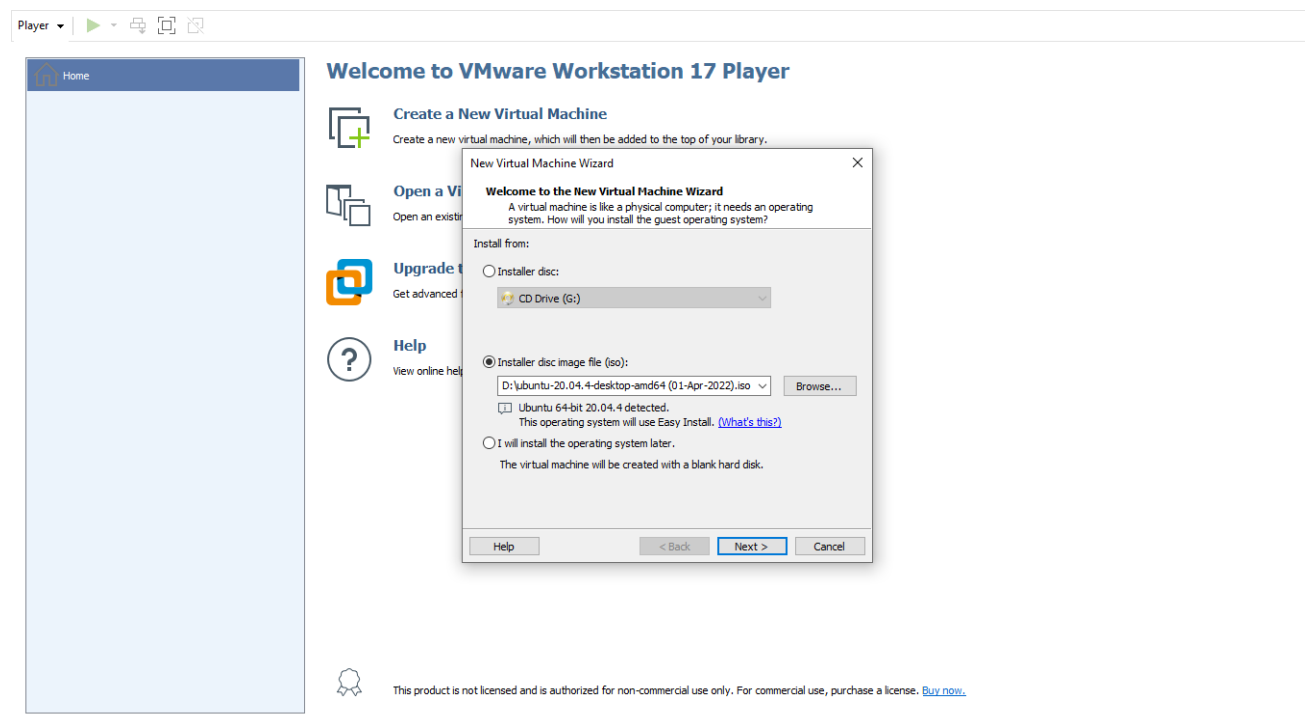

After click on this link following window will be appear.

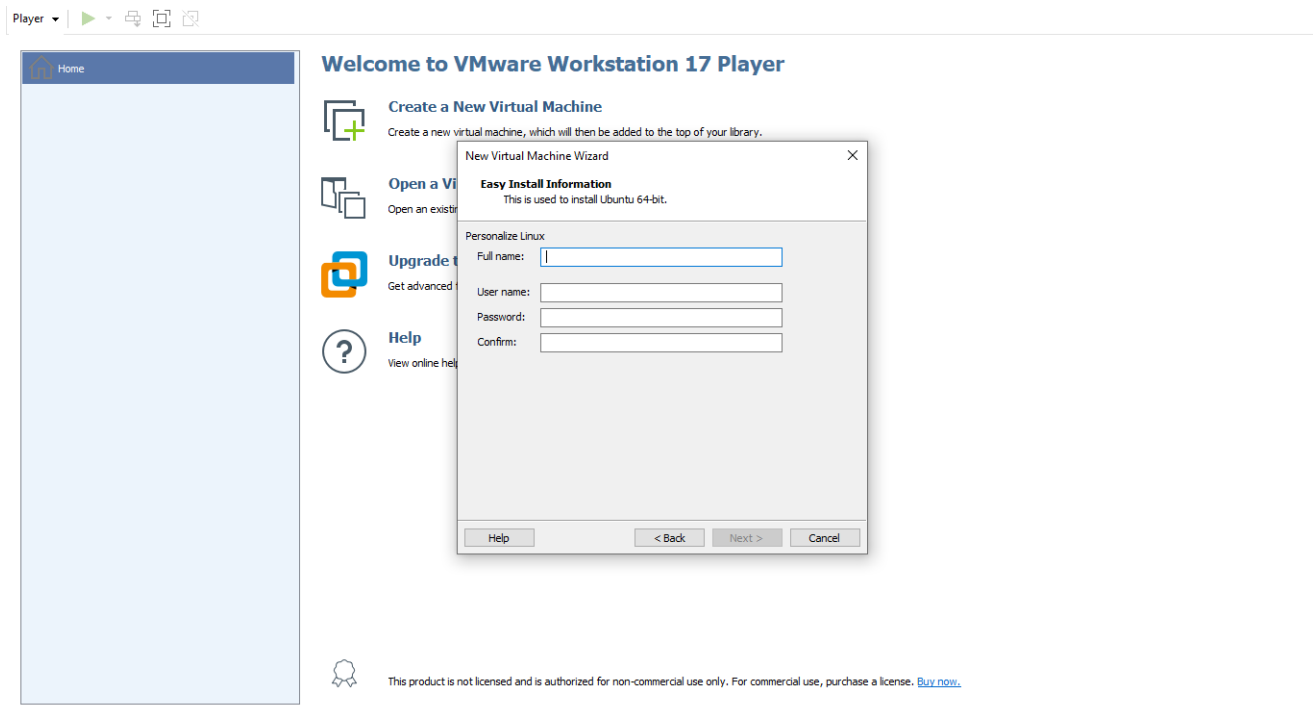

After downloading all software open VMware and Follow the following Steps. Following windows will be shown.

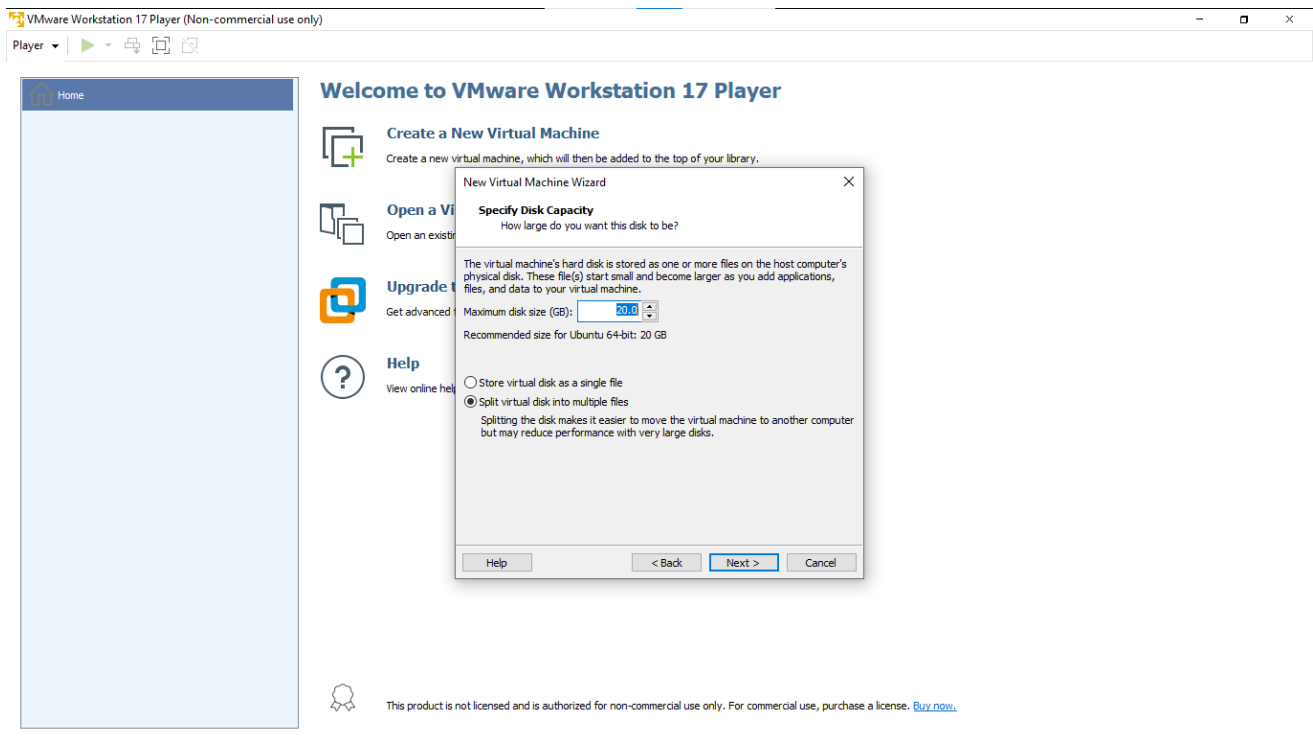

Click on "Create new Virtual Machine".

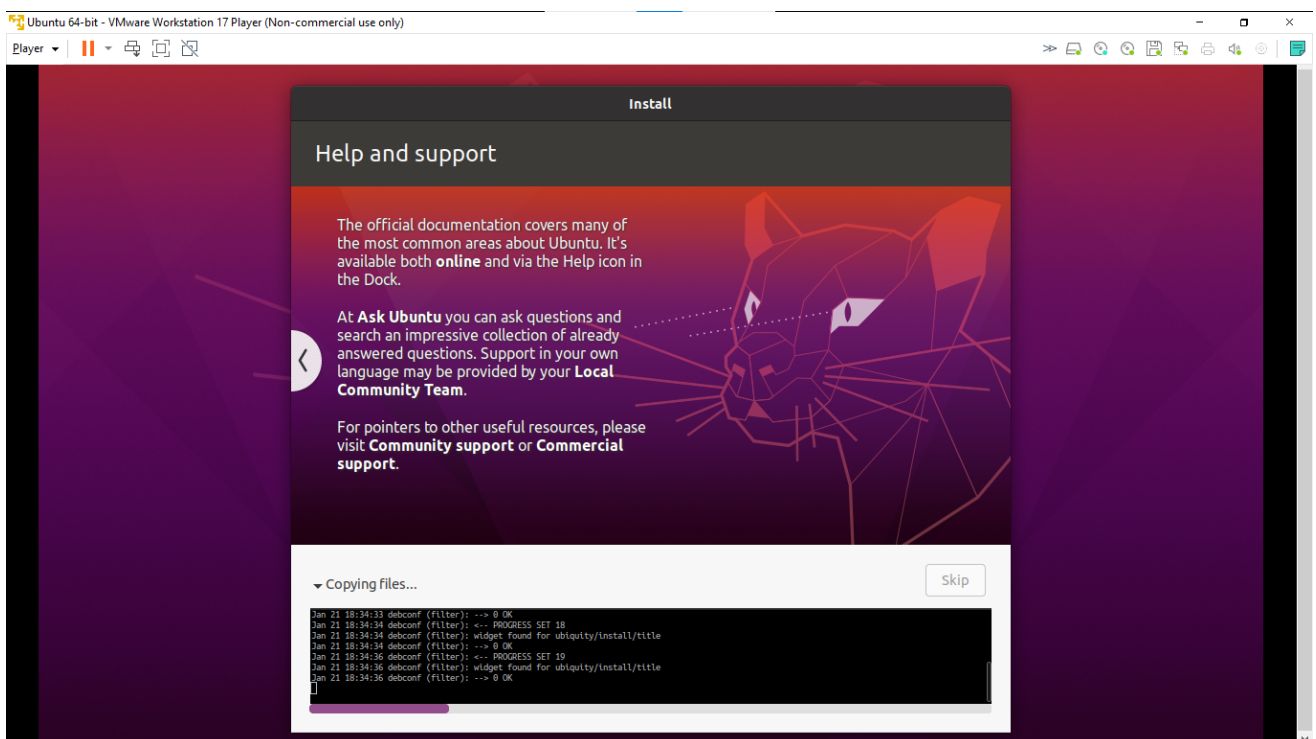

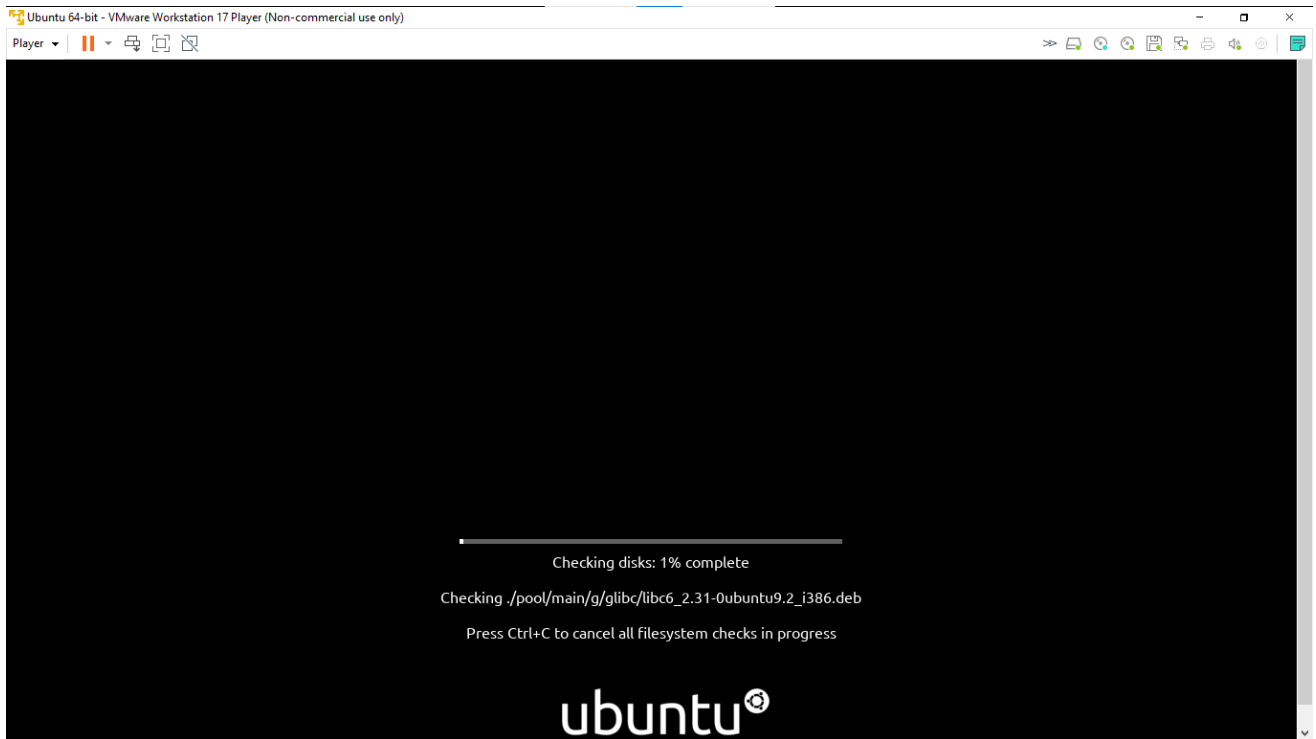

Click on Button "Next" to continue process.

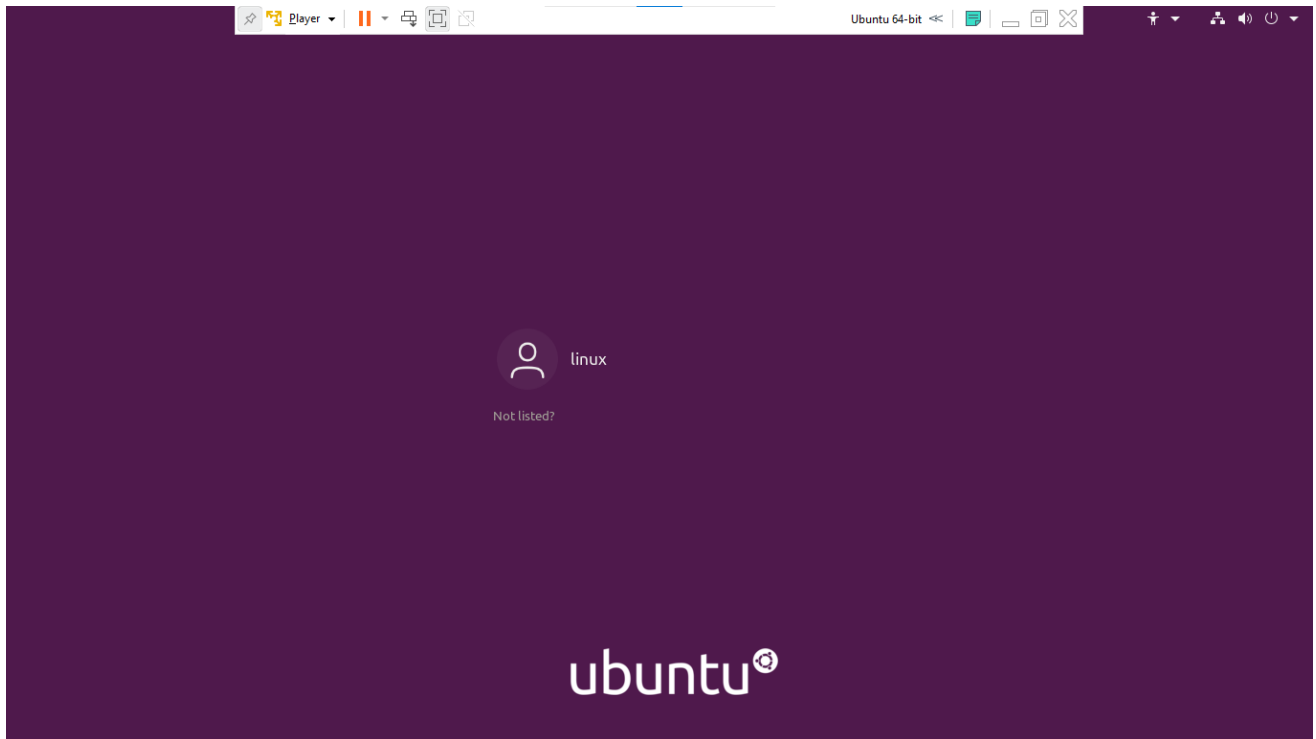

Enter Full Name ,User Name in lowercase alphabets "abc123" and also enter password and confirm it. this pass will show when we successfully install ubuntu on VM ware.

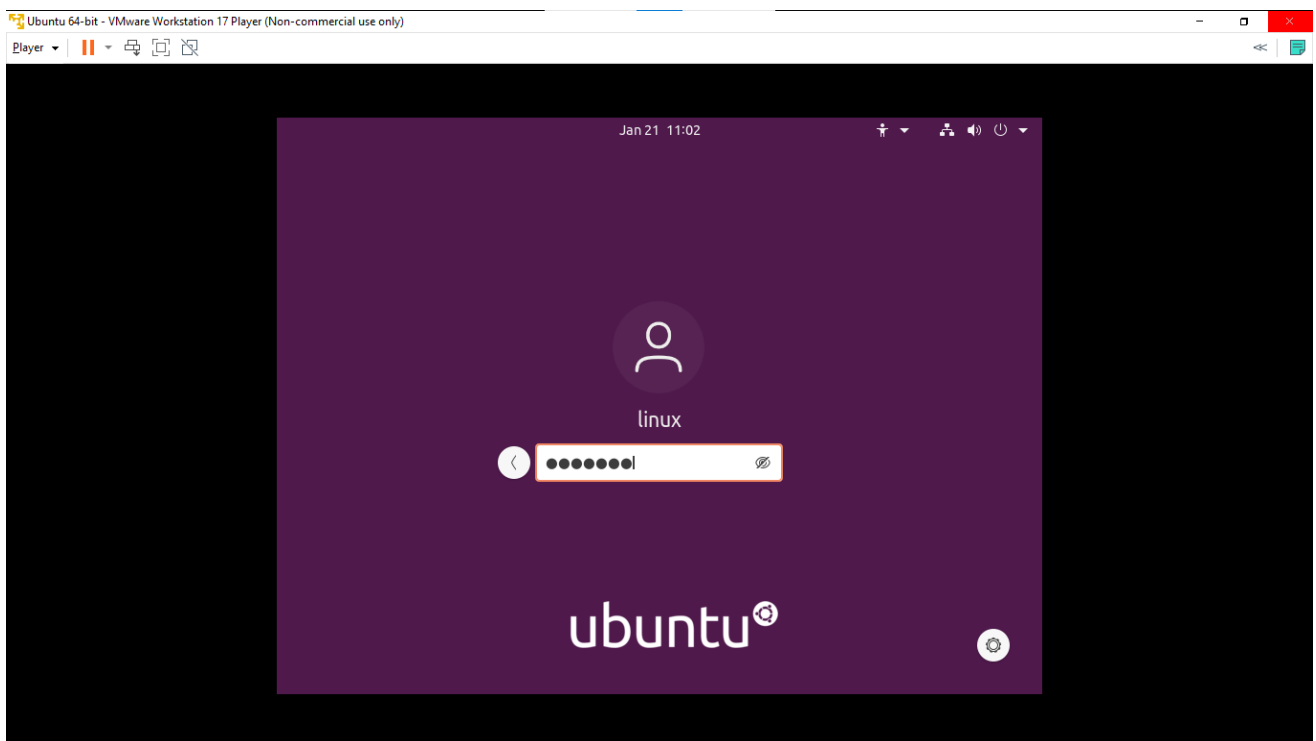

select disk size you want to given to virtual Machine.Then **installation** will start.

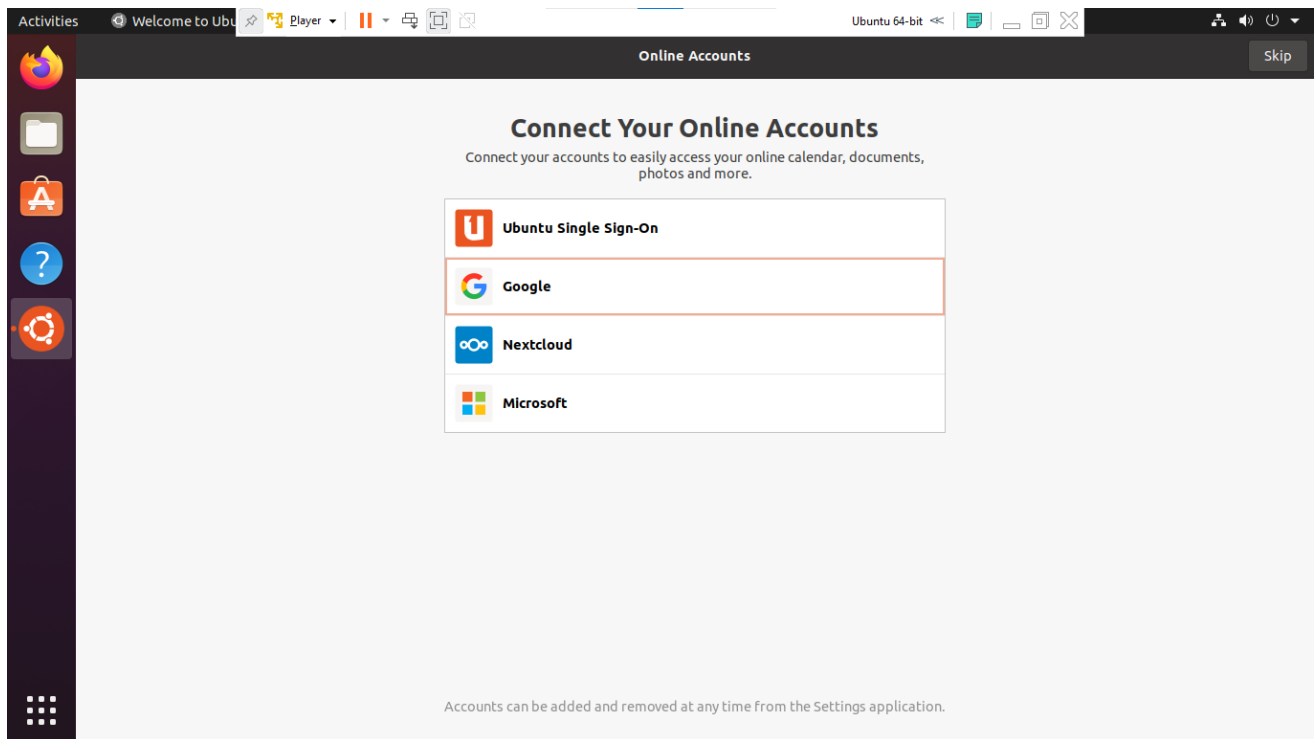

File are copying **Installation is in process.**

Installation is completed. Now we can use Linux on our computer.

Enter Password we set in start. The following windows will appear.

if you want to set any account you can. but you can skip by **Clicking on Top Right "Skip" Button.**

Now Installation has been completed .

you can enjoy Linux.
